# SpaceMaster Series 1 Compact Coil Lines

Coe Press SpaceMaster Series 1 Compact Coil Lines are designed to combine the 3 functions of unwinding, straightening, and feeding of coil stock into 1 machine. This compact arrangement provides optimum coil feeding efficiency with pilot release operation and saves valuable plant floorspace. The machine is rigidly mounted on a common machine base for maximum stability during the feeding process. The coil reel is driven by an AC inverter duty drive and motor. The combination feeder-straightener is driven by a closed loop digital servo drive and motor.

## STANDARD FEATURES

- Motorized Coil Reel for Payoff
- Inverter Duty AC Variable Speed Drive
- Heavy Duty Backplate Construction
- 60" Maximum Coil Outside Diameter
- Hydraulic Mandrel Expansion Feature
- Fail Safe Disk Brake for Clockspring Control
- Material Width Scales on Mandrel Pads
- 4 Heavy Duty Coil Keepers
- Air Operated Coil Hold Down Arm
- Endwheel for Clockspring Control
- Air Operated Coil Hold Up for Threading
- Electric Eye Type Loop Control
- Variable Speed Pay-off Operations
- Hand Crank Entrance Edge Guides
- 3 Roll Catenary Support Section
- Heavy Duty Machine Cabinet Base
- +/- 4" Passline Height Adjustment
- Passline Adjusted by Screw Jacks
- 9 Straightener Rolls – 5 over 4
- All Straightener Rolls Power Driven
- Precision Spur Gear Drive Train
- Permanently Lubed and Sealed Bearings
- Pivoting Type Straightener Head
- Head Opening for Access and Cleaning
- Feed Rolls With #3 Matte Chrome Finish
- Full Width Upper and Lower Feed Rolls
- Yaskawa AC Servo Drive - Digital Control
- Desk Type Slant Top Control Enclosure
- Centralized Controls for Reel and Feeder
- ServoMaster Controller MMI

### OPTIONS

- 460 Volt Step-down Transformer
- 72" Maximum Coil O.D.
- Extra Set of 4 Coil Keepers
- Hydraulic Traveling Coil Car
- 80 FPM Maximum Linespeed
- Special Expansion Range 19.5"-24.5"
- Motorized Passline Height Adjustment
- Motorized Straightener Roll Adjustment
- Increase Coil Weight Capacity to 11,000 lbs.
- Increase Coil Weight Capacity to 15,000 lbs.
- Dual Roll Upper Coil Guide Assembly
- Motorized Coil Guide Adjustment
- Increase Feed Drive Size and Reduction

## SpaceMaster Series 2 - Features and Benefits

Effective coil containment is provided by a combination of hydraulic mandrel expansion, heavy-duty keepers, and air operated hold down. The motorized endwheel is driven by an AC variable speed motor to maintain tension on the coil during payoff operations. Effective threading is provided by the air operated coil hold-up device designed for bottom payoff.

A heavy-duty funneling plate is used to catch the leading edge of the coil. The pivoting threading assist roll directs the coil into the pinch rolls. Accurate strip guiding is provided by the dual roll entrance edge guides that are mounted within the 3 roll catenary support section. The entrance pinch rolls are mounted on a true pivoting yoke mechanism and driven by a cluster gear arrangement.

The feeder-straightener is mounted on a heavy-duty cabinet base with +/- 4" passline adjustment. The upper straightener rolls are designed with a pivoting type head for pilot release operations. The upper roll depth adjustments are made by entrance and exit side handcrank mechanisms with corresponding scales and position readouts for repeatable set-ups.

Accurate strip alignment to the press and tooling is assured by single roll exit edge guides. An offset feature of +/- 1" is provided to allow adjustment of the strip position. The feed rolls are mounted on a true pivoting yoke mechanism and driven by a cluster gear arrangement. This design assures full engagement of the drive gearing regardless of material thickness.

Coe Press Equipment Corporation

# SpaceMaster Series 3 Compact Coil Lines

Coe Press SpaceMaster Series 3 Compact Coil Lines are designed to combine the 3 functions of unwinding, straightening, and feeding of coil stock into 1 machine. This compact arrangement provides optimum coil feeding efficiency with pilot release operation and saves valuable plant floorspace. The machine is rigidly mounted on a common machine base for maximum stability during the feeding process. The coil reel is driven by an AC inverter duty drive and motor. The combination feeder-straightener is driven by a closed loop digital servo drive and motor.

## STANDARD FEATURES

### OPTIONS

- 460 Volt Step-down Transformer
- 72" Maximum Coil O.D.
- Hydraulic Traveling Coil Car
- 80 FPM Maximum Linespeed
- Special Expansion Range 19.5" - 24.5"
- Motorized Passline Height Adjustment
- Motorized Straightener Roll Adjustment
- Motorized Coil Guide Adjustment
- Increase Coil Weight Capacity to 15,000 lbs.
- Increase Coil Weight Capacity to 20,000 lbs.
- Increase Coil Weight Capacity to 30,000 lbs.
- Increase Feed Drive Size and Reduction

## SpaceMaster Series 3 - Features and Benefits

A heavy-duty funneling plate is used to catch the leading edge of the coil. The pivoting threading assist roll directs the coil into the debender roll section where coil set is removed from the strip before it is directed into the pinch rolls of the feeder. Accurate strip guiding is provided by the dual roll entrance edge guides that are mounted within the 3 roll catenary support section.

The upper straightener rolls are designed with a pivoting type head for pilot release operations. Accurate strip alignment to the press and tooling is assured by single roll exit edge guides. The feed rolls are mounted on a true pivoting yoke mechanism and driven by a cluster gear arrangement. This design assures full engagement of the drive gearing regardless of material thickness.

Effective coil containment is provided by a combination of hydraulic mandrel expansion, heavy-duty coil guides, and hydraulically operated hold down. The motorized endwheel is driven by an AC variable speed motor to maintain tension on the coil during payoff operations. Effective threading is provided by the hydraulic operated hold-up device designed for bottom payoff.

The SpaceMaster Compact Coil Line is provided with centralized controls for the entire system. The servo controls and machine controls are integrated into a sloped front control enclosure. Jog pendants are provided for functions that require the operator to access the machine. The ServoMaster Controller has a user-friendly keypad and display for job set-up and troubleshooting.
