As of October 2011, the T2SS2-16 and T2SS2-16-GM gas springs have been replaced by the T2SS3-16 and T2SS3-16-GM. The new models are fully interchangeable and use the same installation tool as the T2SS2-16 gas springs as well as feature the same height. The main visible difference is the tank whose diameter changes from 13.5mm (0.53 in.) to 12mm (0.47 in.). The new models will ship as the T2SS2-16 inventory is depleted.
