

**Custom Designed for Your Dies**

Self-propelled unit adapts to most Lexco Lift Tables to facilitate the changing and transporting of dies. Designs are available for load capacities of up to 8000 lbs. These two models illustrate some of the possible options. Prices of these illustrated units and other design alternatives are available upon quotation.

SP-3935  
6000 lb. Capacity —  
Self-propelled Lift Table with  
"Push-Pull" Device for  
Loading and Unloading Dies

The table shown above illustrates an electric-hydraulic, push-pull device for horizontally transferring heavy loads. Two removable pins, which protrude thru slots in the table top, may be used to push or pull the rated load across flat surfaces and without requiring rollers under the load. For more information on this simple two-step operation, please contact us. (Lexco also offers a one-step push-pull unit as an alternative to the above.)

SP-3428  
6000 lb. Capacity —  
Self-propelled Lift Table  
with Roller Conveyor & Winch
